

## Smart Watch Data Collection Guidelines

1. Follow the script for data collection.
2. We will deduct about 10 seconds from both start and end of an episode to remove noises. Please keep this in mind. Activity must be started within 10 seconds of pressing the start button, and the stop button must be pressed within 10 seconds of an activity is finished.
3. It is better if someone controls the app, and the subject performs the activity. In this case we can reduce the trim duration.
4. After uploading the files to server, you can check the status of data collection, and delete files if necessary.
5. Be cautious before deleting any file. Do not delete any data collected by others.
6. After sending data from mobile to server, please wait at least some time (depending on the file numbers, file sizes, bandwidth) before clicking the refresh count button. This may be one of the reason of file missing/corruption.
7. After saving data, wait some time before viewing the data statistic /sending data.
